DETAILED ACTION

Upon reconsidering the *Election/Restrictions* requirement, previous Office Action on *Election/Restrictions* is vacated. Applicants are reminded that claim 1 was canceled by Applicants on 03/21/2003. However, most pending claims from 14-30 are still depended on this canceled claim. Applicants are reminded to amend the claims to depend on a current pending to ensure an efficient prosecution on the record.

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 13, 14, 15, 16, 19, 20, 23-30, drawn to a diagnosis reagent comprising a recombinant antigen and a single synthetic antigen of HCV, classified in class 424, subclass 228.
 - II. Claims 13, 14, 15, 17, 18, 19, 21-30, drawn to a diagnostic reagent comprising a recombinant HCV antigen and three synthetic HCV antigens, classified in class 424, subclass 202.1.

Upon election of Group I, Applicant is additionally required to elect a single synthetic HCV antigen from: A). HCV core antigen, B). HCV NS4 antigen and C). HCV NS5 antigen to be examined on the merits. This requirement is not to be construed as a requirement for an election of species, since each of the antigen is not a member of a single genus of invention, but constitute an independent and patentably distinct invention.

The reason the election/restriction follows:

The inventions are distinct, each from the other because of the following reasons:

1. Inventions Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of groups I and II are directed to the structurally and functionally different products, e.g. product of Group I comprises one recombinant antigen and one synthetic antigen, whereas the product of Group II comprises one recombinant antigen and more than three synthetic antigens. They produce different effects.

Art Unit: 1648

2. Inventions Groups A, B and C are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of groups A-C are directed to structurally and functionally different antigens, e.g. the antigen of the group A is core antigen, whereas the antigen of group B is a NS4 antigen.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or search for group A does not need to search group B, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
